Art Unit: 1774

Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants' statement of the prior art.

Applicants acknowledge in their specification that stick preventative agents are conventionally employed in dye donor elements in order to produce better images. The particular stick preventative agents recited in the claims appear to be acknowledged by applicants as known materials for the function of reducing undesired sticking. The experimental modification of these prior art stick preventative agent-containing dye donor elements in order to ascertain optimum-operating conditions (e.g., determine the speed at which printing occurs) fails to render applicants' claims patentable in the absence of unexpected results.

Since unexpected results with respect to the claimed line speed are not selfevident in applicants' specification comparative examples, it is suggested that
applicants elaborate in detail about the significance of the data contained in their
specification tables.

Any inquiry concerning this communication should be directed to Bruce Hess at telephone number (571) 272-1525.
